DATE MAILED: 10/27/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.		Applicant(s)	
	09/818,556		FUJIKAWA, YASUYUKI	
	Examiner		Art Unit	
	Thu V. Huynh		2178	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 August 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-13 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-13 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 28 March 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to communications: RCE filed on 08/15/05 to application filed on 03/28/2001 which has foreign priority filed on 10/31/2000.
2. Claims 1, 6 and 9 are amended.
3. Claims 1-13 are pending in the case. Claims 1, 6 and 9 are independent claims.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. **Claims 1-3, 6 and 7 remain rejected under 35 U.S.C. 102(e) as being anticipated by Chadha, US 6,061,698, patented 05/2000.**

Regarding independent claim 1, Chadha teaches a recording medium readable by a computer, tangibly embodying a program executable by the computer to make a modified

Art Unit: 2178

document consists of a plurality of areas and is stored in a memory device, a part or all of said plurality of areas being provided with identification, (Chadha, abstract, col.1, line 51 – col.2 line 6; col.4; lines 16-45; and col.7, lines 24-28; a computer readable program used to make a modified document (final document 70) based on an original document (markup 38), wherein said original document is stored in a memory device (visual tool 10), and consists plurality areas, wherein a comment areas being provided with special tag identifiers), by:

- receiving an instruction from outside other than from the original document (Chadha, figures 2 and 3; col.4, line 39 – col.5, line 60; linked tool provides instructions for linking the user selects predefined script file and the area between a matching pair of special comment statement in the original document);
- causing a document modifying apparatus to identify one or more areas in the original document specified by the identification in said instruction (Chadha, figures 2 and 3; col.4, line 39 – col.6, line 15; identifying the area between a matching pair of special comment statement in the original for linking the selected identifier and identified area); and
- causing the document modifying apparatus to automatically modify said identified one or more areas in a manner defined by said instruction in order to make a final modified document (Chadha, figures 2 and 3; col.3, line 42 – col.4, line 20, modifying the identified area to adding linkage identifier for the selected script in order to make a final modified document 70).

Regarding claim 2, which is dependent on claim 1, Chadha teaches the limitations of claim 1 as explained above. Chadha teaches wherein said document is in a fixed format including a comment, and said identification is included in the part or all of said plurality of areas as the comment (Chadha, col.4, line 39 – col.5, line 39).

Regarding claim 3, which is dependent on claim 1, Chadha teaches the limitations of claim 1 as explained above. Chadha teaches wherein said fixed format is an HTML (Hypertext Markup Language) (Chadha, col.1, line 65 – col.2, line 6 and col.4, line 54-64).

Regarding independent claim 6, the claim incorporates substantially similar subject matter as claim 1, and is rejected along the same rationale. The limitation of “means for storing said plurality of areas to a memory” must be included, since the markup language is searched and displayed to the user, areas in the markup language must be store in a memory for searching and displaying.

Regarding dependent claim 7, the claim incorporates substantially similar subject matter as claim 2, and is rejected along the same rationale.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2178

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

(b) This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claim 4 remain rejected under 35 U.S. C. 103(a) as being unpatentable over Chadha as applied to claim 1 above and further in view of Hobbs, US 6,523,022, filed 07/1999.

Regarding claim 4, which is dependent on claim 1, Chadha teaches the limitations of claim 1 as explained above. Chadha does not explicitly disclose wherein an area of the document includes another area by taking a nesting structure.

Hobbs teaches web page document includes nesting tag so that an area includes another area (Burch, col.20, line 17 – col.21, line 35).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have combined to Hobb's nested HTML tag and Chadha's web page to provide a nested structure for the web page in markup language document (HTML), since such nested HTML tag would have facilitated the layout information for the web page. It is also noted that nesting structure in HTML for formatting information was well known in the art at the time the invention was made.

8. Claim 5 and 8 remain rejected under 35 U.S. C. 103(a) as being unpatentable over Chadha as applied to claims 1 and 6 above and further in view of Homer et al., "Instant HTML", copyright 1997, pages 76-107.

Regarding claim 5, which is dependent on claim 1, Chadha teaches the limitations of claim 1 as explained above. Chadha does not explicitly disclose wherein said program including the step of inputting a name of an area, a start line of the area and the number of lines included in the area as the identification.

Homer teaches “src” to identify an image name; “hspace” to identify a start line of the image image; “width” and “height” to identify the number of lines include in the image area (Homer, pages 76 and 78). Homer also teaches “coords” to identify a start position of the image (Homer, page 101).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have combined Homer’s image area identification into Chadha to inputting such identification into the web document, since such identification would have used to an area that used to add or edit the content of the document as Chadha disclosed in col.1, lines 56-59.

Regarding dependent claim 8, the claim incorporates substantially similar subject matter as claim 5, and is rejected along the same rationale.

9. **Claims 9-12 remain rejected under 35 U.S. C. 103(a) as being unpatentable over Chadha as applied to claim 1 above and further in view of Popp et al., US 2002/0133637 A1, filed 08/1995.**

Regarding independent claim 9, the claim incorporates substantially similar subject matter as claims 1 and 6, and is rejected along the same rationale. Chadha teaches a storage unit

Art Unit: 2178

(Chadha, col.4, lines 22-25). Chadha does not explicitly disclose a document transmitting unit transmitting said document to a network. However, Chadha teaches document, such as HTML embeds dynamic data is sent over a network (Chadha, col.1, lines 11-29).

Popp teaches transmitting web page document to a client via WWW (Popp, page 1, paragraph 13 and page 4, paragraph 54; transmitting a web document to display on client's browser through WWW).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have combined Popp's transmitting feature into Chadha to include a document transmitting unit to transmit web page document to a network, since transmitting unit allows the web page document to be sent to clients on the Internet.

Regarding claim 10, which is dependent on claim 9, Chadha and Popp teach the limitations of claim 9 as explained above. Refer to the rationale relied to reject claim 9 the limitations of "a client unit including a displaying unit, receiving said document from the network, and displaying said document on said displaying unit" is included. The rationale is incorporated herein.

Regarding claim 11, which is dependent on claim 9, Chadha and Popp teach the limitations of claim 9 as explained above. Chadha teaches said instruction is inputted from an application utilizing said document, to said plurality of areas specified by the identification, by said instruction inputting unit (Chadha, col.5, line 29 – col.6, line 20 and col.6, line 7 – col.7, line 9).

Regarding dependent claim 12, the claims incorporate substantially similar subject matter as claim 2 and is rejected along the same rationale.

10. **Claim 13 remain rejected under 35 U.S. C. 103(a) as being unpatentable over Chadha in view of Popp as applied to claim 9 above and further in view of Homer et al., “Instant HTML”, copyright 1997, pages 76-107**

Regarding dependent claim 13, which is dependent on claim 9, the claims incorporate substantially similar subject matter as claim 5 and is rejected along the same rationale.

Response to Arguments

11. Applicant's arguments filed 08/15/05 have been fully considered but they are not persuasive.

Applicants argue that with respect to claim 1 and 6 that, “[i]n contrast, in the present invention, such kinds of instructions are not embedded in an original document. In other words, an original document is separated from a program which defines how to make a modified document”.

This is not persuasive. Chadha teaches an original document includes a matching pair of comment statement, the area between the matching pair of comment statements. Chadha teaches the linkage tool (program to make the linked document) provides instructions to linking the selected identifier by a user of a script file and identified area between the matching pair of comment statements in order to adding the selected identifier at the identified area in the original

Art Unit: 2178

document (Chadha, col.5, line 27 – col.6, line 15) as well as the applicants point out “the way of modifying the document to make a final modified document is determined by the linkage identifier ... final modified document is determined by at least three programs, that is, a program to make the linked document file”. Therefore, Chadha’s instructions are not from the original document.

Applicants argue that “the final modified document recited in the claims does not correspond to the linked document file in Chadha” without providing reasons.

This is not persuasive. The final modified document 70 is created from the linked document 50 through linkage tool 40 (Chadha, fig.2).

Applicants argue that “the linked document file is produced manually by a tool in Chadha”.

This is not persuasive. Chadha teaches, a user selects of linkage identifier as points out by the applicants. Examiner agrees that the selecting step is manually. However, the linked document file is produced based on the selected linkage identifier. The user does not have to add the selected identifier at the identified area in the original document.

Applicants argue that neither Hobbs, Homer, nor Popp teaches or suggests the amended claims’ features.

However, Chadha teaches such features as explained above.

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Devanbu, US 6,681,371 B1, filed 12/1999, teaches method for using container documents as multi-user domain client.

Hind et al., US 6,938,204 B1, filed 08/2000, teaches array-based extensible document storage format.

Sorge et al., US 6,691,281 B1, filed 06/1999, teaches publishing/republishing data tables in HTML documents while maintaining formatting and functionality for restoring back the data tables.

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thu V. Huynh whose telephone number is (571) 272-4126. The examiner can normally be reached on Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen S. Hong can be reached on (571) 272-4124. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
